

VI HealthCheck Benefits

- ▶ Ensure that Virtual Machine systems are configured with optimal loads
- ▶ Identify under-utilized systems—on average 20% unused server capacity—as well as processing bottlenecks, and techniques for re-balancing workloads using VMware tools and capabilities
- ▶ Speed server performance by avoiding unnecessary slowdowns from backup and other data management processes
- ▶ Learn new methods for avoiding unscheduled as well as scheduled system downtime
- ▶ Enable IT alignment to business priorities and budget
- ▶ Benchmark tools and management practices against industry standards
- ▶ Ensure Disaster Recovery preparedness
- ▶ Configure your VMware deployment for easier, less burdensome management
- ▶ Lower disk-space consumption from Virtual Machine “sprawl,” by learning better methods for governing the creation and use of new VM instances
- ▶ Gain exposure to the latest trends, tools and techniques in server virtualization
- ▶ Lower your cost of VI3 management
- ▶ Improve your IT team’s ability to evaluate your existing VI3 deployment, and to better judge when you need to expand to add more processing
- ▶ Avoid wasteful spending on new VI3 systems before you need them
- ▶ Evaluate and fine-tune your data management methods and tools for VI3 systems

LogicsOne™ VI3 HealthCheck Service

Optimizing VMware Infrastructure 3 in Performance, Availability, Utilization and Manageability

Getting More from Less

Staying ahead of the virtualization adoption curve can be a challenge. Adopting VMware infrastructure is just the first step in the process. Along with VMware systems, you need new management practices and tools—many of which are still being invented for this evolving technology. Keeping up with the latest information can seem like a full-time job.

Your IT team may feel that it’s taking one step backwards for every two it takes ahead. You may find your team confronting a new set of problems to solve, like virtual machine “sprawl,” accelerated data growth on disk, slow and incomplete backup, and frequent system downtime.

Stay Ahead with LogicsOne™

If you have already deployed virtualization systems, you can benefit from a LogicsOne™ VI3 HealthCheck Service. This service is designed to identify problems in your deployment, provide you with an actionable plan for improvement, and expose your IT team to the latest VMware tools and information. Organizations using this service find, on average, 20% unused server capacity that can be reallocated in the virtualized environment—for immediate recapture of their investment.

No matter where you find yourself on the virtualization adoption curve, LogicsOne experts can assist you with accelerated adoption of industry best practices and tools. Your VI3 systems gain in optimized performance, availability, and utilization. Your IT team gains in knowledge, know-how and information required to make better decisions for managing the VI3 environment day-to-day, and into the future.

Key Service Activities

- ▶ Our virtualization experts will work with your team on-site, to examine up to five VMware ESX Server systems and your VirtualCenter management server.
- ▶ Throughout the project, our experts share VMware best practices, operational tips and tricks, management strategies and other relevant information to assist your team in understanding their systems better.
- ▶ Our experts examine and collect configurations of your virtualization servers, and review a sampling of virtual machines.
- ▶ You gain a detailed, written LogicsOne VI3 HealthCheck Report with specific, actionable recommendations for evolving and maturing your VI3 systems environment.
- ▶ You attend a final review meeting, at which the findings from the LogicsOne VI3 HealthCheck Report are formally presented and discussed with your team.

Service Scope and Deliverables

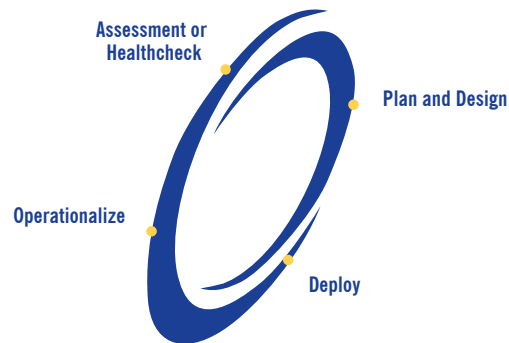

This service is offered as a three-day on-site service engagement. A detailed LogicsOne VI3 HealthCheck Report is written immediately following the on-site service engagement, and presented in a telephone briefing.

- ▶ Includes examination of up to five VMware ESX physical server systems
- ▶ Includes examination of one VMware VirtualCenter management server system

Service Requirements

- ▶ The environment must include existing VI3 systems; otherwise, consider a LogicsOne VI3 Assessment Service
- ▶ Administrator (root) access to VI3 installations

LogicsOne™ Continuous-Evolution Services Cycle

Why LogicsOne™?

LogicsOne virtualization experts work every day with organizations just like yours, to assess, plan, deploy and optimize Virtualization Infrastructure environments. LogicsOne uses a process of continuous evolution, to help you to accelerate your adoption of VI3 systems, from whatever part of the adoption curve you are at today.

Whether you are just starting out or have had VMware systems in place for years, our action-plans and recommendations will help you evolve your virtualization methods and systems more quickly, with less wasted effort and investment. Our experience in measuring, base-lining and analyzing existing VMware deployments quickly and accurately translates into better results for your virtualization-based business.

LogicsOne is a VMware Gold Authorized Consultant (VAC), which is the highest level of certified consulting capability recognized by VMware. LogicsOne was the recipient of the 2008 Rising Star of the Americas Award from VMware, the IT virtualization leader.

Work with the LogicsOne™ team of virtualization experts to accelerate your adoption of virtualized systems, from whatever part of the adoption curve you are at today. To schedule a LogicsOne consultation, send your email inquiry to LogicsOneServices@logicsone.com

About LogicsOne™

Since 2004, LogicsOne has been delivering virtualization professional services to Fortune 500 and SMB clients from its company headquarters in Atlanta, Georgia. With an exclusive focus on virtualization technologies, LogicsOne has developed a field-proven delivery approach that aligns technology to business requirements. Organizations experiencing LogicsOne's continuous-evolution approach to virtualization have realized significant cost-savings advantages, accelerated adoption cycles, and advanced their business and IT objectives.
